

Say Hello to Ello!

High Performance Maritime Satellite Telecommunications System

Ello is about connecting the maritime community. For too long people on board were forced to settle for low speed connections and stratospheric costs but Ello aims to change that

Ello originally designed in Brazil for the maritime community now being brought to the global stage by Brazilian professionals with a passion for the sea.

Ello is the first solution that meets the Brazilian Legal and tax requirements including ANATEL homologation and teleport termination in Rio de Janeiro. Systems are available for immediate installation in Brazil, United States and soon Globally.

Modem architecture allows for the antenna control to be integrated into the modem. No longer is needed a separate Antenna Control Unit (ACU), giving you one less point of failure and complicate configuration. Simply mount the antenna to the pedestal, connect the cables and turn it on. In less than 5 minutes from installation you will be connected to the internet!

But the speed is not only in the installation and activation. Our focus is on the user experience and that is why we developed Velloz! A satellite link acceleration and optimization system that increases system performance by 20% to 200% *.

Velloz performs various process such as TCP/IP acceleration, web-caching, de-duplication, intelligent adaptative QoS, and also managers access to content, generating bandwidth usage reports per user, application or service, allowing maritime professionals to focus on their jobs as opposed to becoming an IT expert.

Ello - Your link to the world!

Small in size but huge on features and capacity!
We miniaturized everything including the cost.
Ello 60 offers all the features you need in a small system, reducing the costs of connectivity while at the sea.

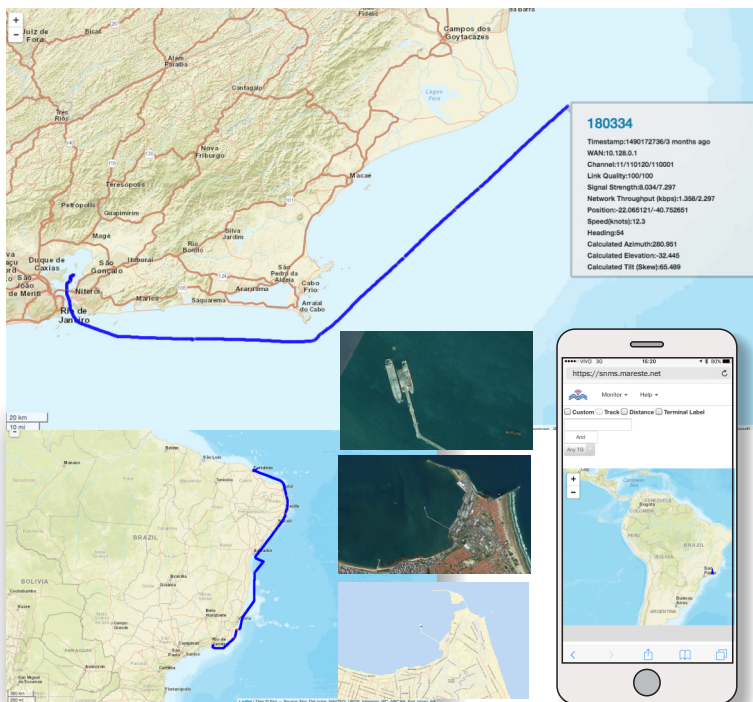

The simplest system of the seven seas
From installation to the activation in the coverage are you need we provide detailed planning, clear invoices and no surprises!

Better performance through better technology.
Although simple, Ello brings the latest in satellite telecommunications technology and a robust and durable robotic system.

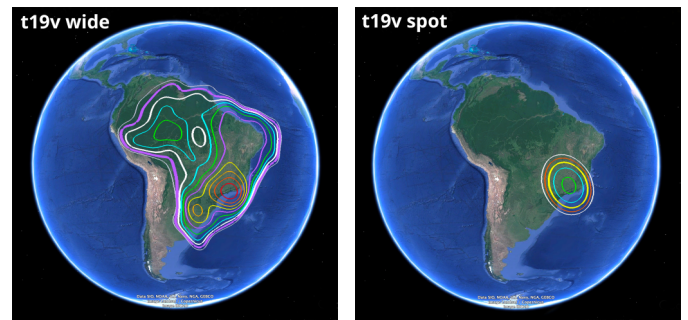

Born for speed
Remote connections shall not be slow.
Say hello to **Velloz!**

Monitoring and control
Included in the package is Ello SNMS Service Portal with real-time information of the vessel's position, heading, speed, Ello system status, IP statistics and much more.

Using historical logging the end-user can produce reports from any period in time directly on the map or using the provided satellite imagery.

Ello 60

Powered by

TELESAT

Operating with the Telstar 19 satellite, located at 63W position, ELLO is available for all vessels from Brazil.

ELLO service coverage area continues to expand thanks to our global agreement with the world's largest satellites operator.

If your route is not covered by ELLO yet, please contact us and know more about our expansion plan.
